### V 9112: Master Marine Antenna.

The V9112 Marine Master is the first Glomex's model started to manufacture in 1984 and it represents the real Glomex's foundation. Nearly the totality of the mayor boat-builders worldwide when decide to install a series of television antennas on their boats it's a V9112. Obviously the actual version of the the V9112 is the fifth version-(1984, 1987, 1992, 1998 and 2004 are the year of introduction of the different version).

Some new improvement have been made to the 2004 version, including an antenna element, made on Mylar base of printed circuit board. basically it is a technology used on the computer industry. In a working day of 8 hours, the PCB making machine make and test about 10.000 unit of V9112 antenna element which is a combination of six UHF dipoles, and three VHF dipoles too to reach the perfect omnidirectionality.

In 2004 we also introduced a new plastic compound to make the antenna radome and the base as the former U.V resistant nylon was too much higroscopic to guarantee the lifetime warranty as some antennas, especially on tropical climates could get dirty as the pollution can be integrated on the plastic radome. The new A.S.A. compound grant better UV resistance, stability and no higroscopic.

It was tested on the Glomex UV and aging chamber and it resisted for a period of time that can simulate about 20 years onboard on standard marine environment without visible modification of the structure and the colour.

Nowadays, the television has been changing and the digital terrestrial television has different needs, as the 2004 version of the V9112/00, has got an amplifier by pass that allows to exclude the amplifier from the coaxial line and get the antenna signal directly on the tv set or digital decoder to avoid problems on areas with very strong signal as well were electromagnetical noise are present an exclusive Glomex feature that cannot be missed as the near future of television will be digital only.

The new flat tv sets opened finally to the possibility to install a decent size tv screen on the boats too and gives the possibility to have a real tv screen on midsize boats like at home and allows finally to the sailboats to get gold size screens.

The V9112/00 is the perfect solution for the sailboats as well as for motorboats but on the masthead the tv signal is better and the amplifier by pass is the natural solution to avoid reflections from all the reflections in the area like tower building, etc etc.

The V9112/00 is proposed in three different version. It also has an economy version, the V9112EC, that features only gain control like our competitors and no by pass the V9112 A/B has an integrated A to B switch on the amplifier which allows to switch from the antenna signal to the dock system or satellite antenna, avoiding to have the double wiring in the boat.

The V9112/00 and the V9112 A/B can accept also an input from a DVD or other equipments. By the V9147 splitter, the V9112 can be used also as a radio antenna avoiding to have another antenna on board or to split the VHF antenna signal to the radio avoiding to use a safety equipment like the VHF radio system as a recreational device.

The V9112's 2007 version comes up with 20mts of low loss twin screen coax cable in order to cover more the needs of the sailboats. Obviously the 2007 version comply with the C. E .rules as well with the new ROHS and WAAE introduced on the 2006.

**Finally, the V9112 is backed by the Glomex exclusive**

**LIFETIME WARRANTY.**

**The 2006 is ending and some balances can be done in Glomex.**

In Glomex, we are satisfied of the increase on number of antennas sold as well as for the satellites installed on the new boats on 2006. Unfortunately, some new products expected to be ready by the end of 2006 have been postponed to the spring 2007. Since 2006, we have some new staff, who joined us in 2006, whom are young and passionate for their job and more motivated to service our customers despite what happened in the past. I think it is a positive balance even if we do not forget to work hard to improve it, always!!!

I wish to everyone Merry Christmas and a happy, healthy and prosperous 2007.

### GLOMEX NEWS

**Sylvia Sampaoli**  
North Italy Sales

**My name is Silvia Sampaoli, it's been for few months I joined the Glomex's team. I'm in charge for the North Italy sales. My email address is [Sylvia@glomex.it](mailto:Sylvia@glomex.it). I'll be more than happy to reply to your questions.**

**Merry Christmas and Happy New Year**

**Glomex at the Amsterdam METS 2006-- marine EQUIPMENT TRADE SHOWS.**

Arrived to his nineteenth edit and taken into consideration one of the most significant halls for the operators of the nautical sector, also this edit does not have disappointed the expectations of the wide basin of users, coming from well 88 different countries-according to the official estimates-with a particular representation coming from the surrounding European countries (United Kingdom, Germany, France, Spain, Belgium, Italy), without however forgetting Scandinavia, Turkey and United States. I think to be pointed out worthy the expansion of emerging markets as Russia and of the eastern neighbouring European countries, which every year increase their presence in terms of visits. The METS represents a fundamental appointment, as turned to the specialists of the nautical sector.

For Glomex this was the 18th edition, we were located at the stand 01.213 and we wish to give our more sincere thanks to all our distributors, customers and more general visitors of the industry for their support and the interest shown to our range of antennas, in particular forward the POLARIS V9130 TV antenna. The interest was huge and we had the pleasure of accepting a wide specialized audience much interested. Listening to your question and sharing your values, we believe in the chance to improve us constantly to offer you a productive and favourable service. To all Glomex's friends whom we were not been able neither to grip the hand, we send a greeting and we wish to meet them soon personally.

Wishing you

**Merry Christmas  
and  
Happy New Year**

we remind you that our  
office **are closed** from  
the 23.12.2006 to  
the 1.1.2007
