RA106

The VHF antenna RA106 is the right solution for the one who wants to communicate in sea without problems. Conceived both for sailboats and powerboats, available in stainless steel or in glossy fibreglass whip and proposed in a large range to fulfill all the needs of all Glomex clients. The tapered stainless steel whip can absorb any bump without suffering damages.

The fibreglass whip version has a glossy white polyurethane painting that ensures a total protection to the inside antenna's components.

The exclusive Glomex waterproof solderless connector (RA106) allows the installation without soldering, thus simplifying the replacement of the existing antennas.

Every RA106 is tuned individually and is supplied with all the accessories necessary for the installation including the coaxial cable RG58 C/U (MIL-C-17).

RA106 FOR SAILBOAT SPECIFICATIONS:

Polarization: Vertical
Height: 0.90 cm
Gain: 3db
Impedance: 50ohms
Frequency range: 156-162 mhz

Get it with 18 mt or 25 mt of coax cable

Airwaves: the way for being more close to our customers.

Allow me to say that this first trimester of the 2007 has been marked from a climate of confidence and positiveness. With this spirit, in this third edition of our newsletter "Glomex Airwaves" besides providing you information, we would like to give you the possibility to interact with us and giving you also more space in order to better understand and forehead your demands. We wish this initiative will provide you with a higher quality service of greater quality and us with an instrument to better interpret your requirements.

Enjoy your job.

Piero Baldassarri
